1. EXECUTIVE SUMMARY

A global overview of LIFE Águeda was presented at the opening plenary session of the VII Congress of the Iberian Society for Ichthyology, held in Faro in June 2018. Despite the focus of the event in all aspects of fish biology, habitat and resource management were also encompassed, from riverine environments to open waters. Under this comprehensive context, LIFE Águeda was introduced in the plenary session within a broader overview targeting diadromous fish populations in Portugal. The presentation was made to an international audience of researchers coming from a large array of research areas. The event consolidated the ecological relevance of fish communities and promoted the transfer of multidisciplinary knowledge across freshwater and marine environments.

2. DISSEMINATION PROGRAM

LIFE Águeda was introduced within a broader scope presentation entitled “Diadromous Fish in Portugal: Past, Present and Future”. The high complexity of migratory fish populations management and conservation was highlighted, with LIFE Águeda’s proposed solutions and their innovative and integrative aspects emphasised. General and specific objectives were referred and related to the multiple European policies addressed with the project’s actions.

3. DISSEMINATION OUTPUTS

Participation at the SIBIC’s congress allowed to promote key management solutions encompassed by LIFE Águeda next to an international audience of researchers engaged in resource and environment management and conservation. Pilot solutions presented were considered of great interest and application, as was the case for the multidisciplinary scope and the project’s aiming towards a sustainable use of the targeted habitats and species, while still promoting the compatibilization of ecosystem uses.
