EXECUTIVE SUMMARY

On the 9th of November 2023, EDIA and APA are promoting the conference "Biological Invasions! What future?", where the latest knowledge and challenges related to invasive species will be discussed. This conference provides a forum dedicated to the debate and sharing of knowledge, strategies, policies and funding as instruments to combat these invasive species, involving various Portuguese and Spanish organisations, such as universities, associations and public bodies in the areas of the environment and local development.

1. DISSEMINATION PROGRAM

Fluviário de Mora (Câmara Municipal de Mora) presented a paper on the invasion of fish species in rivers. A special relevance was given to the LIFE Águeda project and its component dedicated to the monitoring of ecological effects because exotic species and their interactions in aquatic ecosystems affect resource management. So the presentation included the objectives of the project, the study area, the report of methods, and preliminary results used to study the migratory behavior and dispersion patterns of the migratory specimens within the Vouga river basin.

2. DISSEMINATION OUTPUTS

The conference made it possible to promote the main management solutions adopted by LIFE Águeda to an interdisciplinary audience and to transfer multidisciplinary knowledge between freshwater and marine environments.
