1. EXECUTIVE SUMMARY

LIFE Águeda team was invited to be present on the 2018 edition of Inter-LIFE PT, an annual event promoting the interaction among LIFE projects (Portuguese and from other EU Member States), encouraging synergies and enhancing experiences and knowledge sharing among the participating projects.

This event is organized as part of LIFE CAP PT - "PORTUGAL CAPACITY BUILDING FOR BETTER USE OF LIFE" (LIFE14 CAP/PT/000004).

Participants presented recently approved and concluded projects, sharing experiences and advices for good practices within LIFE. The event had the presence of projects from different strands (e.g. Nature, Environment, Biodiversity, and Governance).

As part of the capacitation agenda, a presentation was held, by the organizers, to assist successful applications for funding of projects under the sub-programmes for Environment and Climate Action, with valuable information on the most relevant aspects and major changes of the funding tools, processes and key deadlines.

2. DISSEMINATION PROGRAM

A global presentation of LIFE Águeda was held, highlighting key aspects of the project (project summary, objectives, EU policies tackled, budget information, partners involved).

General and specific objectives were presented and related to the multiple European policies addressed with the project's actions. The presentation also highlighted the communication and dissemination actions already held, as well as those programmed to happen in the short term. A summary of expected impacts, their quantification and related policies was also presented.

Abstract

No abstract was prepared for this presentation.

Presentation

A presentation was prepared, which will be accessible through the project's website.

Other materials

The project's roll-up was under display along the event. Leaflets with major information were also available to participants. The participation was disseminated with a post on the Project's Facebook page.

3. DISSEMINATION OUTPUTS

Key comments praised the multidisciplinary scope and the project's aiming towards a sustainable use of the targeted habitats and species, while still promoting the compatibilization of ecosystem uses.

Members of the team from LIFE RELICT (LIFE16 NAT/PT/000754) have shown interest in the intervention area of LIFE Águeda, as a pontic rhododendron (*Rhododendron ponticum* ssp. *Baeticum*) population occurs in river Alfusqueiro's margins. Possible networking and synergies among projects were highlighted, concerning restoration of that habitat within LIFE Águeda's intervention areas.
